Click Next.

Select First option, if this will list the mount point automatically then select option 2

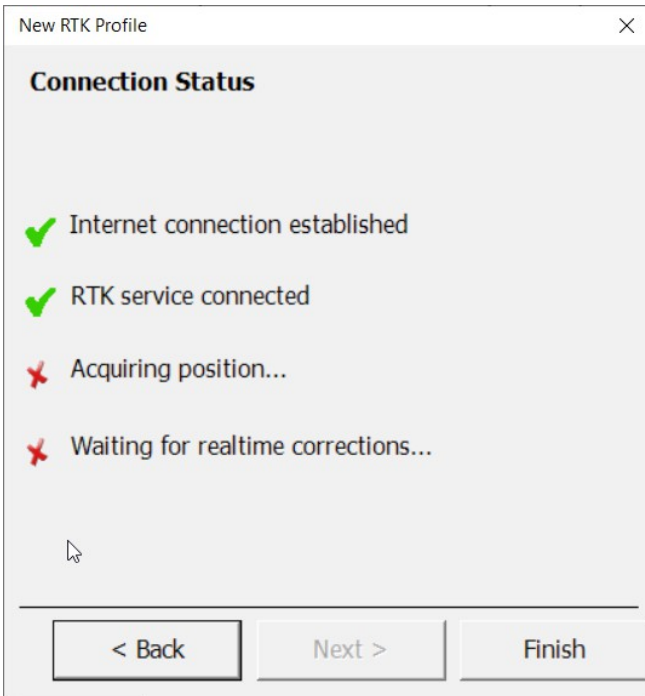

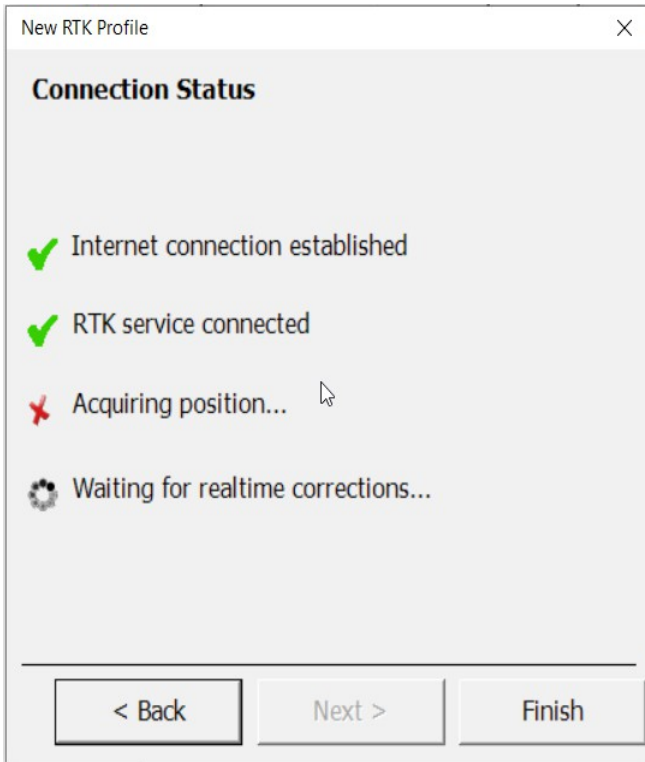

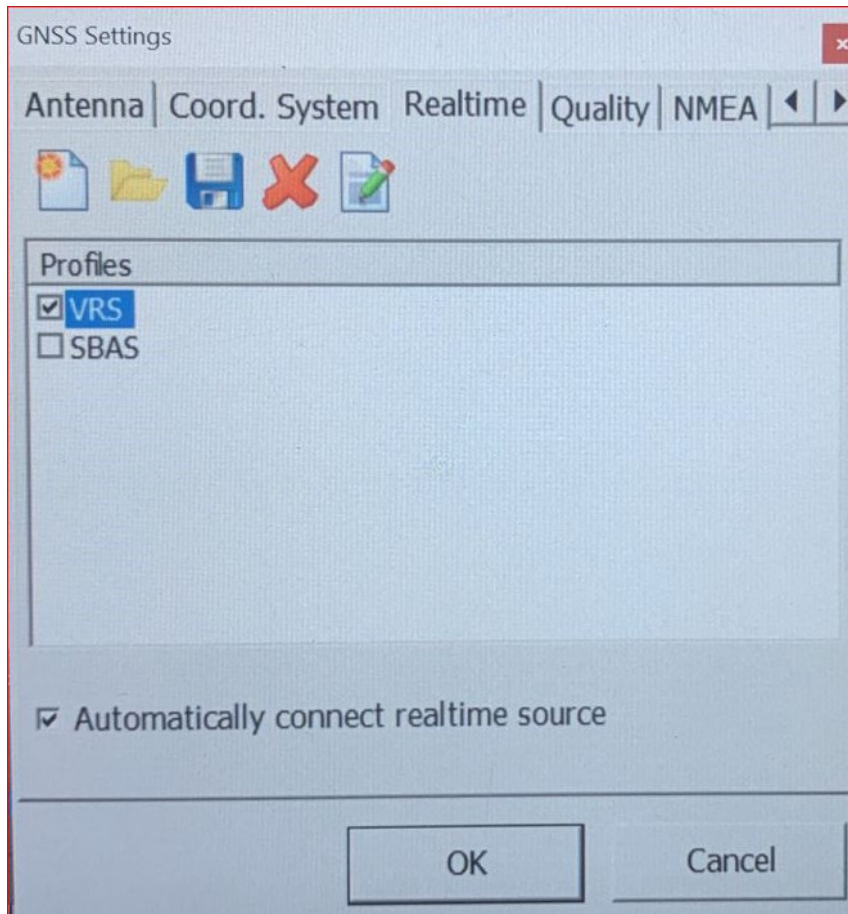

Click Next.

All option must show green Tick, it means base is working perfectly and you will get 1-2cm accuracy.

## 6. Collection of RAW data

Tap Log Raw Observations  to start raw data logging. It can be used to setup a Zeno as reference station or as a simple way to measure points for later post-processing. Enter a point name and tap Occupy to start the raw observation logging. Tap Stop as soon as you've finished. The raw observations are stored in Leica mdb format (m00) and can be used for post-processing in Zeno Office or Leica Geo Office. Disabled if no antenna is active.
